MEDIA REGISTRATION MECHANISM FOR IMAGE FORMING DEVICE

ABSTRACT

A media registration mechanism for aligning print media comprising a registration wall and a plurality of media carriers configured parallel to each other and parallel to the registration wall. Each of the plurality of media carriers can be positioned a different distance from the registration wall and configured to move print media in a direction along the registration wall. Also, each of the plurality of media carriers can be configured to move the print media at a speed based on a position of a media carrier relative to the registration wall to cause the print media to rotate towards and align against the registration wall.
